Create Tasks About Contact

Built-inReactHooks.txt

Hooks let you use different React features from your components. You can either use the built-in Hooks or combine them to build your own. This page lists all built-in Hooks in React. State Hooks State lets a component “remember” information like user input. For example, a form component can use state to store the input value, while an image gallery component can use state to store the selected image index. To add state to a component, use one of these Hooks: useState declares a state variable that you can update directly. useReducer declares a state variable with the update logic inside a reducer function. function ImageGallery() { const [index, setIndex] = useState(0); // ...
